

**Divya Mohan** is an experienced specialist in climate adaptation and disaster risk reduction with nearly two decades of expertise at the intersection of science, policy, and community resilience in the Himalayas and the broader Asia-Pacific region. Currently, she leads the Strengthening Climate Adaptation in Himalayas (SCA-Himalayas) project, supported by the Swiss Agency for Development and Cooperation (SDC), advancing critical efforts to protect vulnerable mountain communities from climate-driven disasters.

In a region where melting glaciers, flash floods, and glacial lake outburst floods (GLOFs) pose increasing threats, Divya collaborates closely with government agencies, research institutions, and local partners to enhance disaster preparedness, risk management, and water resource governance.

As Team Leader, she promotes integrated approaches that combine innovative technologies with inclusive adaptation planning to reduce disaster impacts and strengthen resilience. Through fostering collaboration among diverse stakeholders, Divya supports a shared vision of resilient Himalayan communities equipped to navigate an uncertain climate future with foresight and confidence.
